INSTRUCCIONES COMUNES

Las entidades aplicarán lo siguiente:

- a) Salvo que se especifique explícitamente lo contrario en la descripción de la cartera, todas las posiciones se contabilizarán el 13 de octubre de 2016. Una vez contabilizadas las posiciones, cada cartera madurará durante todo el ejercicio de evaluación comparativa. Además, los cálculos se realizarán bajo el supuesto de que la entidad no tomará medidas para gestionar la cartera durante todo el período de ejercicio de evaluación comparativa. Salvo que se indique expresamente lo contrario en las especificaciones de una determinada cartera, los precios de ejercicio de las posiciones en opciones se determinarán en relación con los precios del subyacente observados al cierre del mercado el 13 de octubre de 2016.
- b) A efectos de validación previa al ejercicio de evaluación comparativa, la valoración de cada cartera se presentará a la autoridad competente de la entidad el [fecha de entrada en vigor] a más tardar. Por valor de mercado inicial (VMi) se entenderá la suma del valor de mercado en la fecha de contabilización y del saldo no realizado (es decir, pérdidas o ganancias obtenidas pero aún no realizadas o que se realizarían si se cerrara la posición) entre la fecha de contabilización y la fecha y hora de la valoración. Por lo tanto, el VMi es el valor a precios de mercado en la fecha y hora de la valoración. La valoración se realizará el 27 de octubre de 2016, a las 17.30 h, hora central europea (16.30 h GMT).
- c) Los riesgos de las posiciones deberán calcularse sin tener en cuenta los costes de financiación.
- d) En la medida de lo posible, el riesgo de contraparte se excluirá a la hora de valorar los riesgos de las carteras.
- e) El VaR, con un intervalo de confianza del 99 % y un horizonte de tenencia de diez días, se calculará diariamente. El valor en riesgo en situación de tensión ("sVaR") y la exigencia de capital por riesgo incremental ("IRC") se pueden calcular semanalmente. El sVaR y el IRC se basarán en los precios al cierre de la jornada de cada viernes en el intervalo de tiempo del ejercicio de evaluación.
- f) Respecto de cada cartera, se indicarán los resultados en la moneda de base de la cartera con arreglo a los cuadros que figuran *infra*.
- g) En caso de operaciones que incluyan posiciones largas en permutas de cobertura por impago ("CDS"), se supondrá que se paga una comisión inicial inmediata para asumir la posición con arreglo a los usos del mercado. Se considerará que las fechas de vencimiento de todas las posiciones en CDS en el ejercicio se ajustan a las fechas habituales de vencimiento trimestral.
- h) Las especificaciones adicionales necesarias para realizar los cálculos de precios requeridos para las posiciones en CDS se efectuarán de manera coherente con las normas y convenciones del mercado comúnmente aplicadas.
- i) Deberá utilizarse la fecha de vencimiento que garantice que la operación está más próxima al plazo residual hasta el vencimiento especificado.
- j) En relación con los datos importantes de la especificación del producto que no se contemplen explícitamente en el presente anexo, se indicarán las hipótesis que se han utilizado, en particular la convención sobre el cómputo de días, y, en los casos en que esté permitida, la elección de un instrumento negociable y líquido, junto con los resultados.

- k) Las abreviaturas ATM, OTM e ITM hacen referencia a la posición relativa del precio actual o futuro del activo subyacente de un derivado en relación con el precio de ejercicio de ese derivado (es decir, lo que en inglés se denomina “moneyness”). ATM significa “at the money” (precio de ejercicio neutro), OTM significa “out of the money” (precio de ejercicio desfavorable) e ITM significa “in the money” (precio de ejercicio favorable).
- l) Todas las opciones se tratarán como si se negociaran en mercados no organizados (“OTC”), a no ser que se especifique expresamente lo contrario en la cartera.
- m) Se seguirán las convenciones temporales estándar para las opciones OTC (es decir, las fechas de expiración son el día hábil siguiente a un día en que no haya negociación). La convención temporal aplicable a las opciones será la siguiente: el plazo de vencimiento de una opción a n meses será n meses. Cuando las opciones expiren un día en que no haya negociación, las entidades ajustarán la fecha de vencimiento en función del día hábil, de conformidad con las prácticas comunes del mercado.
- n) Todas las opciones OTC se considerarán como sigue:
- americanas, en lo que respecta a las acciones de un único emisor y las materias primas;
 - europeas, en lo que respecta a los índices de acciones, las divisas y las opciones sobre permutas financieras.
- o) En relación con todas las opciones, se excluirá la prima de los cálculos del valor de mercado inicial, por lo que las opciones se considerarán “descubiertas”.
- p) En lo que respecta a la cartera de negociación de correlación (CTP), IM representa las medidas de riesgo resultantes de los cálculos del modelo interno para las carteras de negociación de correlación, de conformidad con el artículo 377 del Reglamento (UE) n.º 575/2013. Se indica como “todos los riesgos de precio” (APR) en el anexo VI del presente Reglamento de Ejecución.
- q) Para las posiciones expresadas en una moneda de base común pero compuestas de uno o más instrumentos denominados en una moneda diferente, el valor de mercado inicial (VMi) se convertirá a la moneda de base común de la cartera utilizando el oportuno tipo de cambio al contado al final de la fecha de contabilización (13 de octubre de 2016). Para los resultados de pérdidas y ganancias y los valores en riesgo y en situación de tensión (VaR, sVaR, IRC, APR) se utilizará la misma moneda de base común de la cartera utilizada para la conversión del VMi, aplicando los tipos de cambio correspondientes y adecuados.
- r) Al contabilizar todas las posiciones, se seguirán los usos de mercado apropiados, a menos que se especifique lo contrario. En las siguientes secciones, “larga” significa “comprar” y “corta”, “vender”. En el caso de las posiciones en CDS, “larga” significa “comprar protección” y “corta”, “vender protección”, de acuerdo con las prácticas habituales del mercado.
- s) Cuando un instrumento sea objeto de una operación corporativa, en particular un requerimiento de pago por parte del emisor, o un impago u operaciones similares, las entidades excluirán ese instrumento de la cartera junto con cualquier CDS u opción relacionada.
- t) En relación con una serie de un determinado índice, por “on the run” se entenderá la serie más líquida y negociable de ese índice específico disponible en el mercado. Las entidades comunicarán la serie del índice elegida junto con los resultados obtenidos en la celda de texto adecuada de las plantillas.
- u) El tipo de interés de oferta en el mercado interbancario del euro (“EURIBOR”) es el tipo calculado por el *European Money Markets Institute* respecto de distintos vencimientos para los depósitos interbancarios a plazo en euros.
- v) El tipo interbancario de oferta de Londres (“LIBOR”) es el tipo calculado por el *Intercontinental Exchange* respecto de distintos vencimientos para depósitos interbancarios a plazo en monedas diferentes.
